

So i live just outside of Pittsburgh, PA and constently travel on the major highways running in and out of the city of Pittsburgh. I use channel 215 to get the weather and traffic reports all the time. I know i can get the information i need right then and there. What should i do, turn to a FM channel and wait 20 minutes until they do their weather or traffic report. I already chose and pay for XM radio...i'm going to use it. I know there are many out there whom feel the same as i do...so therefore you should reject the NAB's petition 04-160. The petition is unneeded and just a waste of time, unlike the XM traffic and weather channels they so helpfully provide.
